

Heycoach!!

Release Update

2.24 to 2.25

A few minor bugs detected since the release of 2.24 have been corrected and the additions or modifications to the system are as follows

- 1. Evaluations** You can now enter evaluations(ratings) for players for each game for one or both teams (you can rate the opposing team as well as your own) This information is printed out in the game sheet printouts, player performance and team comparison reports. Evaluation input forms for each game can printed with the additional stats inputs sheets. It's a great tool in helping you decide who to "sit out" when.
- 2. Web Pages** You can now generate your own custom HTML (web) pages just as though they were a standard report. All you need to do is design a page with your own team's logos and links. Somewhere in the middle you put the words "table inserted here" and then save the file as **webpagetemplate.html** in your webpages subdirectory in Heycoach!! and you're done. (Read the help section on this by selecting Help, going to the index and finding Web Pages)
- 3. Shots on Net** Improvements have been made to the shots on net /gamesheet programs to simplify the handling of multiple goalies in a game. Read the help file (gamesheet and shots on sections) on how to swop goalies in and out.

If you have any questions about or problems with the release contact us either by email at support@heycoachsoftware.com or phone 416-449-4495 ext 350 during office hours EST.
