

Heycoach!!

Release Update

2.36 to 2.37

Below is a list of the changes that have been introduced since 2.36

- 1 The league and team schedules can now be printed in portrait.
- 2 Hits as a statistic has been added with relevant reports and summaries
- 3 Multi Media pages displaying images, videos and sound bytes can generated and linked while creating the Game summary page. The linking to the desired images etc is done in the game sheet capture program. View an example at www.stmichaelsbuzzers.com in the game results page. A game that has multi media linked to it has a small  next to the view option.
- 4 The Web Schedule has been improved in that you can now create “match up” schedule pages where additional schedule pages are created for each opposition team. (answers the question :- How many times do we play team x and when). The transfer and linking of these additional pages and is handled with the transfer of a team schedule. View an example at www.stmichaelsbuzzers.com (click on an underlined team)(this only works when generating a team’s schedule page on not a league’s schedule page.)
- 5 The Web game summary now can print the game penalties if desired.
- 6 A Web Photo Album/Scrap book has been added to the system. Be sure to read the help on this before attempting to use it
- 7 The data (table) that Heycoach!! creates in the webpage can now be aligned left, center or right. This is stored as a system default
- 8 All web pages that are created during a selection can be viewed before transferring and not just the last one

If you have any questions or problems with the above please contact us on 416-587-1280 or at hutchy@heycoachsoftware.com
